# Relational Databases with MySQL Week 9 Coding Assignment **Points possible:** 70

Category	Criteria	% of Grade	
Functionality	Does the code work?	25	
Organization	Is the code clean and organized? Proper use of white space, syntax, and consistency are utilized.  Names and comments are concise and clear.	25	
Creativity	Student solved the problems presented in the assignment using creativity and out of the box thinking.	25	
Completeness	All requirements of the assignment are complete.	25	

**Instructions:** Using a text editor of your choice, write the queries that accomplishes the objectives listed below. Take screenshots of the queries and results and paste them in this document where instructed below. Create a new repository on GitHub for this week's assignments and push this document to the repository. Additionally, push an .sql file with all your queries and your ERD to the same repository. Add the URL for this week's repository to this document where instructed and submit this document to your instructor when complete.

# **Coding Steps:**

You have been asked to create a database for a new social media application that your company is developing.

The database must store user data such as username, email, password, etc...

Users are able to post and comment. So, your database must also store post and comment data.

We need to know which user made which posts.

We also need to know which user made which comments, and which post a comment is on.

Posts and comments should both include the time they were created, and what the content of the post or comment is.

Create an Entity Relationship Diagram (ERD) using draw.io to model the database you will create. Insert a screenshot of the ERD in the screenshots section below.

Write a SQL script to create the database. Insert a screenshot of the SQL in your script.

## Hints:

You will only need three tables.

Two tables will have foreign key references.

One table will have two foreign key references.

#### **Screenshots:**

# **QUERIES:**

```
create database if not exists appDB;
use appDB;
drop table if exists comments;
drop table if exists posts;
drop table if exists user;
create table user (
username varchar(20) not null,
password varchar(20) not null,
email varchar(20) not null,
state char(2) not null,
zipcode int(5),
primary key (username)
create table posts (
post_id int(10) auto_increment,
username varchar(20) not null,
content varchar(255) not null,
date_posted datetime default current_timestamp,
primary key(post_id),
foreign key (username) references user(username)
```

```
create table comments (
post_id int(10),
username varchar(20) not null,
content varchar(255),
date_posted datetime default current_timestamp,
primary key(post_id, username),
foreign key(username) references user(username),
foreign key(post_id) references posts(post_id)
);
```

## **RESULTS:**

```
mysql> show databases;
 Database
 appdb
  employees
  information_schema
  mysql
  performance schema
  sakila
  sys
 world
8 rows in set (0.00 sec)
mysql> use appdb;
Database changed
mysql> show tables;
 Tables_in_appdb |
 comments
  posts
 user
3 rows in set (0.00 sec)
```

```
mysql> desc user;
 Field
           Type
                         | Null | Key | Default | Extra |
 username | varchar(20) | NO
password | varchar(20) | NO
                                | PRI | NULL
                                        NULL
 email
           varchar(20)
                           NO
                                       NULL
 state
                           NO
           char(2)
                                       NULL
 zipcode | int
                         YES
                                      NULL
5 rows in set (0.01 sec)
```

mysql> desc pos	sts;	<b>.</b>	<b>.</b>	<b>.</b>	<b>.</b>
Field	Type	Null	Key	Default	Extra
post_id   username   content   date_posted	int   varchar(20)   varchar(255)   datetime	NO NO NO YES	PRI MUL	NULL NULL NULL CURRENT_TIMESTAMP	auto_increment         DEFAULT_GENERATED
4 rows in set (	(0.00 sec)	+	+		* <del>*</del>

post_id   int	Field	Туре	Null	Default	Extra
date_posted   datetime   YES     CURRENT_TIMESTAMP   DEFAULT_GENERATED	username	varchar(20)	NO	 NULL	DEFAULT_GENERATED
